BUSINESS SECTOR

Artelia has established itself in five major areas of development and construction (mobility, water, energy, building and industry). Its consultancy, design, project management and asset management services cover the entire life cycle of assets (design, construction, operation). The Group also handles global contracts and turnkey operations.

Our employees are united by the same passion, that of practising a profession that combines the art of ingenious design with the method of efficient implementation. Artelia offers innovative, realistic, bold and tangible solutions to help improve people's lives.

100% of Artelia's capital is held by its employees. This shareholder model is the foundation of the Group's independence and entrepreneurial dynamism. It is reflected in our strong commitment to building a sustainable world.

Through the projects we undertake, we are responding to the major challenges of our time: resilience to climate change, energy transition, resource conservation, advanced industry, building renewal, better urban living and multimodal mobility. Through our ambitious CSR policy, backed up by quantified targets and assessed by independent bodies, we aim to be an exemplary group in terms of respect for people, the living world and the planet."
