BUSINESS SECTOR

AES performs, according to its customers'specifications, micro winding and standard winding for all types of rotating machinery equipped with the following types of electric motors: AC/DC, brushless, gear motor, alternator, generator, auxiliary power unit APU, servomotor control for actuator, kerosene pump, air compressor, fan, torque motor, flap control, turbine, starter...

AES has acquired recognized expertise in the following areas:

- Prototyping of all types of electrical winding
- Producing lamination packs
- Manual and semi automatic winding of electrical components such as stator, rotor, resolver, coil, electromagnet, magnetic bearing, self induction, for on board electromechanical assemblies
- Vacuum and pressure impregnation
- Molding
- Assembly and integration of complex elements
- AC/DC electrical testing, surge test, gauss meter, resistance, isolation
- Control of special processes: sheet metal bonding, welding, impregnation
- Technical expertise on all types of electric coils
